

Proposal for Solar Installation

I am requesting approval for a solar installation on the roof of my house and garage. The panels should not create visual obstruction of neighbors views or otherwise be a problem. I am providing copies of the site plans for your inspection. The timetable for the installation is flexible at this time due to the need for roof repair and inclement weather. The project should be complete by early Spring.

Thank you for your consideration. Let me know if the project is approved.
